

# Process & Decision Documentation

## Project/Assignment Decisions

For this sidequest, I was getting to know how to use github and vscode so I did not do anything complicated. The task was to make a sketch to make sure it works properly and that we knew how to upload so that is all that I did. The extra bonus was to make a splash screen for the game we played today so I just simply wrote the game's title on the canvas and changed the background colour. It was quite confusing getting github to work and even ran into problems such as pages not working, but was quite fun learning and finding out how to locate and change the repository from private to public.

### *GenAI Documentation*

No GenAI was used in this assignment.
